Simplified cleaning

FEATURES

- MIM One-Piece Construction combines strength and precision into a single piece construction; allowing full advantage of all aspects of the built-in prescription, enabling easy achievement of desired torques and angulations
- 17-4 grade stainless steel robust construction
- Low profile design increases patient comfort
- Maze Base Design has excellent bonding strength 11-12 MPa compared with the conventional mesh base
- Center Line for easy bracket placement
- Torque in base allows for more accurate bracket placement during bonding
- Color coded ID mark for easy identification
- Nano polishing and super-smooth surface to improve patient comfort
- Deep Tie Wing for fast, easy and secure ligation

Improves Bonding strenght thanks to maze base

FILS ET ARCS WIRES AND ARCHWIRES

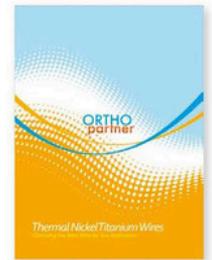

Genius™ Arch System

- .014x.025 THERMAL ULTRA .018x.018 ou .020x.020 (supérieur et inférieur) de 10 à 15 semaines.
- .018x.025 THERMAL ULTRA (supérieur et inférieur) de 6 à 8 semaines (contrôle des axes et recollage si nécessaire).
- .014x.025 THERMAL ULTRA and .018x.018 or .020x.020 (upper & lower) for 10-15 weeks.
- .018x.025 THERMAL (upper & lower) and quality control at 6 weeks to rebound or go to next sequence. 6-8 weeks.

- Si un torque supplémentaire est nécessaire sur les dents antérieures: .019x.025 GENIUS PRÉ-TORQUÉ à 20° 5 à 12 semaines.
- If extra torque is necessary on anterior teeth, .019x.025 GENIUS PRE-TORQUED with an extra 20° torque on anterior for 5-12 weeks.

- .014 THERMAL ULTRA 8 à 16 semaines.
- .018 THERMAL ULTRA 8 à 16 semaines.
- .014 THERMAL ULTRA 8-16 weeks.
- .018 THERMAL ULTRA 8-16 weeks.

1 Alignement Aligning

2 Nivellement Leveling

3 Optimisation du torque Establishment phase

En cas d'extractions :

- .019x.025 ACIER avec crochets pré-soudés pour mécanique de glissement basse friction par module élastique ou ressort Ni-Ti 10 à 20 semaines.

If necessary:

- .019x.025 STAINLESS STEEL posted for low friction space closure with elastics modules or niti coil springs. 10 to 20 weeks.

4 Phase de travail Working phase

5 Fermeture d'espace Space closure

6 Finition Finishing phase

Si nécessaire :

- .019x.025 BETA TITANIUM individualisé pour de meilleures finitions et pour le port d'EIM d'intercuspitation 4 à 8 semaines.

If necessary:

- .019x.025 BETA TITANIUM with individualized arch form. Ultimate finishing wire for targeted torque and alignment corrections, with interarch intercuspitation elastics for ideal occlusion. 4-8 weeks.

- .019x.025 BETA TITANIUM individualisé, dans les cas de Classe I ne nécessitant pas le port d'EIM II ou III.

- .019x.025 ACIER avec crochets présoudés, 5 à 8 semaines pour fermeture des espaces et port d'EIM.

- .019x.025 BETA TITANIUM with individualized arch form. Ultimate finishing wire in class I cases without the need for A-P interarch elastics.

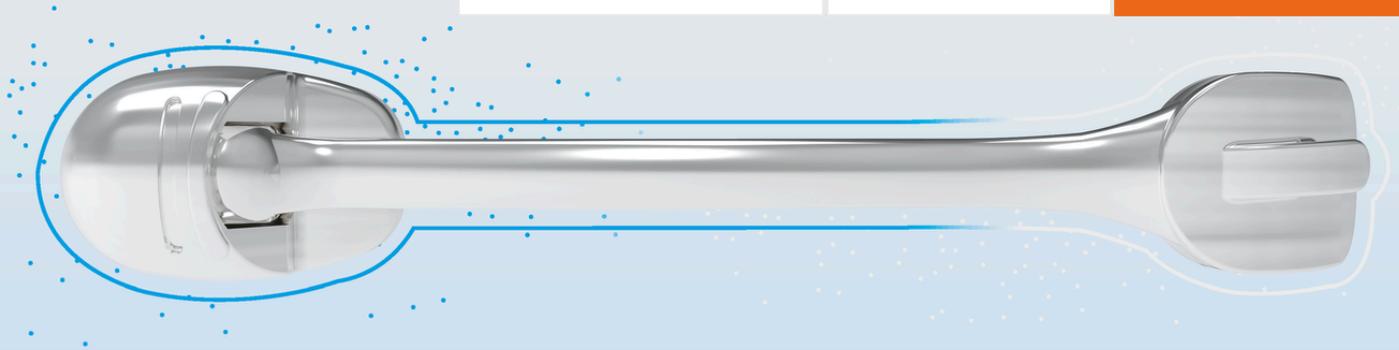

- .019x.025 STAINLESS STEEL posted or non posted, for A-P occlusal correction with interarch elastics. 5-8 weeks.

THE GENIUS BAR

Genius BAR is a universal Class II or III corrector. Genius BAR is made by MIM Technology in ASTM F75 (CoCrMo Alloy). The retentive base is made with high-frequency laser system for excellent bond strength. Genius BAR can be used with any orthodontic adhesive. Genius BAR is available in six sizes, from size 16, 18, 20, 23, 25 and 27.

FEATURES:

- Rounded hook - provides easy placement of elastics and other attachments on the canine
- Free movement on molar - facilitates easy placement (in and out molar position)
- Consistent - provides consistent radius on all sizes
- Universal - designed to be used on either left and side sides
- Resistance - retentive base features laser-cut undercuts to increase bond strength

Genius BAR can be used alone or with other orthodontic aligners
Genius BAR can also be used for Class III malocclusion by placing it on the lower arch.

HOW TO USE:

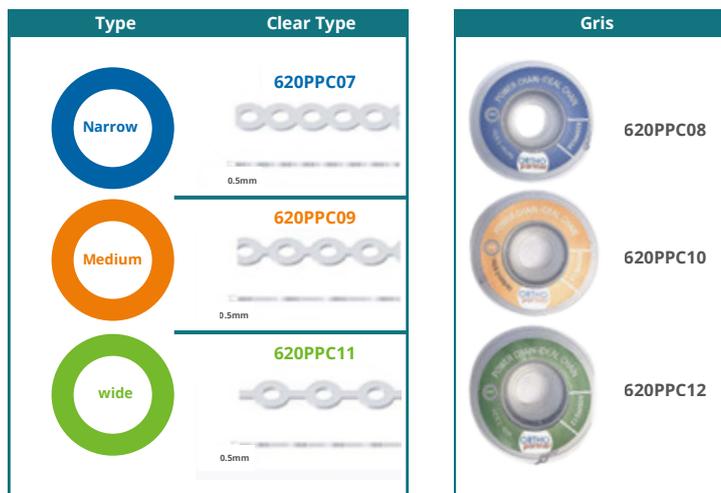

1. Measure the distance from the middle of the canine to middle of the molar buccal surface (or premolar, if needed).
2. Select the Genius BAR from the 6 available sizes.
3. Etch and apply bonding to the canine and molar areas.
4. Put adhesive to the canine and molar areas of the Genius BAR then attach to the surfaces of the teeth then cure.
5. Use suggested elastics from the canine hook to the lower hook of molar buccal tube (Class II) or upper hook of molar buccal tube (Class III).

ADVANTAGES:

- Control on the molar - canine segment. The connection system, as been designed with tight tolerances to increase treatment effectiveness by minimizing undesired inter-arches or canine movements.
- Effectiveness - The position of the hook on the canine medial side increases the appliances effectiveness by increasing horizontal forces to vertical extrusion.
- Easy positioning - The mesiodistal and occluso-gingival positioning lines facilitate the positioning of the socket on the tooth (pls check if this is applicable to Genius BAR)
- Reduced treatment time - the use of Genius BAR improves the molar-canine relationship which speeds up the orthodontic treatment.
- Comfort - The smooth and low-profile design improves patient comfort and compliance during treatment.
